1. Illustrations

The first thing that interested me when I was reading the list was the Illustration section. Reading about the tools described, I think all of them do basically the same things so I would have to use them to make an opinion. The good thing about tools like UnDraw or Drawkit is that they provide you a lot of customizable illustrations so you can find almost anything.

2. Icons

To continue with the section before mentioned, the very next thing that I looked was Icons. This tool do a similar thing as the previous but with icons. From this section I choose FontAwesome and Icons8 because they have scalable vector icons so you can customize for your own purposes.

3. Fonts

To conclude, the last part of the list in wich I was interested was fonts. We can see a lot of tools that provides us tons of fonts for every posible case. I already know GoogleFonts but its good to have more options like FontSpace or Font Squirrel for my proyects.
